01 / THE PROBLEM

Tokenization does not end at issuance.

Assets have rules. Proofs change.
Someone must understand what happens next.

Our focus Make eligibility understandable — and recovery verifiable.

02 / THE OPERATOR

Who can move this asset — and why?

For teams managing permissioned tokenized assets on Solana.

QUESTION 01

What blocked it?

Understand the proof and policy behind the decision.

QUESTION 02

What else is affected?

Find assets relying on the same eligibility proof.

QUESTION 03

Is recovery complete?

Verify the new state, not just a transaction submission.

03 / ONE OPERATIONAL WORKFLOW

Diagnose. Understand impact. Verify recovery.

01 / DIAGNOSE

Make the rule visible

Inspect eligibility, proofs and asset-specific policies.

02 / COORDINATE

Group the impact

Prepare remediation for assets sharing a proof.

03 / VERIFY

Close with evidence

Confirm the operation and read fresh account state.

SAS proofs → asset-specific policies → Token-2022 Transfer Hook

04 / THE BUSINESS HYPOTHESIS

A broad opportunity.
A specific first customer.

WHO COULD PAY

Multi-asset tokenization platforms

Operational tooling and integration support.
Pricing and willingness to pay are unvalidated.

HOW WE TEST VALUE

A limited operator pilot

Measure diagnosis time, manual actions and errors during recovery.

Tokenized asset value is not our software market size. Customer demand and financial savings have not been demonstrated.

05 / WHY THIS TEAM

Compliance experience meets a new generation of builders.

DOMAIN PERSPECTIVE

A compliance professional

Bringing an operational perspective to eligibility and evidence.

TECHNICAL COLLABORATION

Four university students

Complementary skills, shared learning and hands-on product development.

A father and son, building with a team. An ambition to create a company together.

06 / CURRENT CANDIDATE

Live on devnet.
Built for operator validation.

Public Desk · deployed program · genuine test accounts

Read-only browser evidence

Wallet & full security acceptance pending

33
confirmed fixture operations

8
desktop / mobile route checks

55
protected RPC reads in the passing run

Synthetic eligibility data · no real KYC · no production audit · MPL-3643 not integrated
Next milestone: complete acceptance and validate the workflow with an operator.
